

# Surgical Information Packet

Dear Client,

Your pet has been scheduled for an upcoming surgery in the near future. In our attempt to assist clients, we have put together this packet to make surgery day as easy and stress-free as possible.

In addition to this letter, you will find that the following information has been enclosed:

1. Pre-Anesthetic Blood Testing Information Form (**Bring in the Day of Surgery**)
2. Surgical Information Sheet (**Bring in the Day of Surgery**)

Please read carefully all the enclosed information. If you have any questions, please feel free to call us. On your pet's surgery day, we require you to review and sign an **Authorization Form**.

We require a phone number where you can be reached surgery day. **Failure to be reached on the day of the procedure may result in postponement of the surgery.**

The night before your pet's surgery:

**Withhold all food and water after midnight.**

**If you are currently administering any medications, vitamins, and/or injections, withhold the morning doses unless otherwise instructed by the doctor.**

Please make arrangements for your pet to be dropped off at the clinic by 8:15 AM on the morning of the scheduled surgery, unless other arrangements have been made in advance. For example, new clients may be required to have a pre-surgical visit before the morning of the procedure. At time of drop off, our team will be happy to answer any questions or concerns and collect the enclosed/completed **Authorization Form**.

Our veterinary assistant will escort your pet to the surgical prepping area to wait for their surgery. If you have elected any of the recommended blood tests, we will collect all blood samples prior to surgery.

If any questions arise, the doctor may contact you at the number on the Authorization Form.

You are welcome to check up on your pet's status, however, we request that you allow plenty of time for your pet's procedure to be done. At this time, we will be able to give you an idea when your pet may be discharged. Most patients that have spay, neuter, or dental procedures go home around 3:30. When you arrive to take your pet home, the receptionist will bill you out and the veterinary assistant will go over all discharge orders. If you do not understand any instructions, please do not hesitate to ask them to go over them one more time.

We hope surgery day will be a pleasant experience. Remember, our team knows surgery can be an anxious time and we are always available to answer any and all questions concerning the upcoming procedure.

We look forward to serving you and your pet on the upcoming surgery day and for years to come.

# Pre-Anesthetic Blood Testing Information Form

**Please read carefully.**

Our greatest concern is the well-being of your pet. Before putting your pet under anesthesia, we routinely perform a full physical examination.

We also highly recommend and sometimes require that a **Pre-Anesthetic Blood Profile** be performed on all pets undergoing anesthesia to maximize patient safety.

The **Pre-Anesthetic Blood Profile** helps alert our surgeon to the presence of dehydration, anemia, diabetes and/or kidney or liver disease that could complicate the procedure. These conditions may not be detected **without** a pre-anesthetic profile thus not allowing for the most appropriate and safest anesthetic regime to be administered. These tests are similar to those your own physician would run if you were to undergo anesthesia. In addition, these tests may be useful if your pet's health changes to develop faster, more accurate diagnoses and treatments.

Our equipment enables us to perform a mini-profile the day of the procedure. Your pet's surgeon may recommend a Complete Blood Panel be done before the day of surgery to better assess your pet's health. This panel is sent out to our reference laboratory and results take approximately two days to come back.

**The Authorization Form** you will sign on your pet's surgery date will offer a pre-anesthetic mini-profile which includes: PCV (anemia), BUN and Creatinine (kidney), ALT (liver), Glucose (blood sugar), and Total Protein (dehydration).

**Owner Elects to Decline** the recommended pre-anesthetic blood tests at this time but requests that we proceed with the procedure. This is indicated by initialing the appropriate area.

You will notice other tests available that are not included in the above choices. We have selected tests that give the doctors a suitable overview of healthy patients.

On the **Authorization Form**, our feline owners will see a **FeLV/FIV Test** option. We highly recommend this test be performed on all feline patients at least once in their lives because Feline Leukemia and Feline Immunodeficiency Virus (feline AIDS) are viruses for which no cure exists. If your pet goes outside, we recommend administering the Feline Leukemia vaccine as well. Please ask questions if you would like to learn more about Feline Leukemia and Feline AIDS.

We realize surgery and anesthesia are scary for both the owner and the patient and we attempt to make surgery day as safe and comfortable for all involved. The physical examination and blood work done prior to any surgical procedure allows us to best minimize anesthetic and surgical risks and maximize patient safety.

If you have any questions or hesitations about the scheduled procedure, please do not hesitate to call us to discuss any aspect of the upcoming procedure.

# Surgical Information Form

Please read carefully.

## Anesthetic Procedures & Risks

We use a combination of pre-anesthetic medications/injectable and/or inhalant anesthetics to achieve optimum levels of anesthesia that are safe for your pet.

**For short procedures-**an injectable anesthetic is given alone that produces a good plane of surgical anesthesia with a quick recovery.

**For most procedures-**your pet is anesthetized and then intubated (insertion of a tube into the trachea or wind pipe). This will ensure that your pet is able to receive oxygen at all times and prevents aspiration of any fluids into the lungs. Anesthesia is maintained with a gas anesthetic, Isoflurane, which is very safe and is not metabolized by the body. This allows us to have more control over anesthetic depth and it is less irritating to the airways.

**Monitoring & Pain Management-**Monitoring of patients during anesthesia is done by a veterinary assistant continuously from beginning of anesthesia to recovery.

Our clinic strongly believes in compassionate, quality medical care for our patients. As a result, all surgery patients will receive pain management with all surgical procedures. Additionally, pain medication may be prescribed for home use. Additional information will be given at discharge. We hope this program will reduce any pain experienced and aid in a quicker recovery.

**Intravenous Catheterization & Fluids-**We may recommend the placement of an IV catheter and use of IV fluids during your pet's anesthetic procedure. This allows us to have quick, available access to the circulatory system (blood system) in case of an unforeseen emergency. The fluids help provide support to the circulatory system and prevent dehydration, as well as aid in a quicker recovery from anesthesia.

## Potential Surgical Complications

1. **Canine and Feline Spay-** Bleeding; Infections; Recurrent Heat; Urinary Incontinence; Weight Gain; Suture Reactions
2. **Canine and Feline Neuter-** Bleeding; Infection; Testicular Swelling; Suture Reaction (Canine only)
3. **Feline Declaw-**Bleeding; Infection; Limping/Lameness; Regrowth of Nail
4. **Tumor/Lump Removal-** Bleeding; Infection; Swelling and Drainage; Suture Reaction

**It is important for you to understand that there is always a risk of anesthetic and surgical complications anytime these procedures are performed. We strive to take the highest quality care of your pet and take all the added precautions to avoid potential problems. Thank you for entrusting your pet with us.**
